

Biosis Research Pty. Ltd., one of Australia's leading consulting firms in both Cultural and Natural Heritage management and impact assessment, is seeking to appoint a Botanist in our Wollongong Office.

Biosis Research undertakes natural and cultural heritage projects throughout southeast Australia and employs a highly experienced multi-disciplinary team that includes ecologists, archaeologists and GIS operators. We have offices in Wollongong, Ballarat, Canberra, Melbourne, Sydney and Wangaratta.

As part of the Wollongong Regional Office you will have all of the advantages in living in one of NSW's premier regional centres – all of the services of a big city but with affordable housing, short commuting times and a relaxed lifestyle – while working in a range of natural environments with a diverse range of clients throughout the Illawarra, Southern Highlands and NSW South Coast.

Botanist

If you are the successful applicant, responsibilities will include: participating in, conducting and managing projects, the production of technical reports and providing technical advice to our clients. Additional duties will include proposal writing, marketing, maintaining a profile in the professional community as a botanist and contributing to the functioning of the Wollongong office.

Applicants should have appropriate tertiary qualifications and/or field experience in botany (preferably in eastern Australia). Previous consulting experience is not essential, but is highly desirable. Experience in managing projects and well-developed team skills (including excellent communication) will be well regarded. Competency with computers and a current manual driver's license are a must along with a keen desire to be part of a team of specialist consultants. Applicants must be prepared to travel throughout south-eastern Australia.

We offer a modern fully equipped working environment, the opportunity to work with highly experienced consulting and support staff, and an established mentoring and professional development program. Our professional development program may include up to three months, from the time of engagement, in order to enhance both plant identification and field skills depending on the level of experience of the successful applicant.

We will offer a starting salary commensurate with the level of experience of the successful applicant. All employees participate in a profit share program.

A position description is available upon request or from our website. Please visit our website at: www.biosisresearch.com.au

To apply, please forward a job application that highlights and summarises how your training and experience meet the key responsibilities of the position using examples. Your application should also include a covering letter and résumé and be addressed to:

Melanie Thomson, Wollongong Resource Group Manager, Biosis Research Pty. Ltd., 8 Tate Street, Wollongong NSW 2500 or mthomson@biosisresearch.com.au. Applications will close on Wednesday, 8 September, 2010.

Please note: Australian residents / work permits only.
